Program

B. Sc. (Bachelor of Science) in Microbiology

Faculty of Science

Syllabus [Revised 2015-2016]

Table of Contents
## Program Outcomes

**PO1.** Successful demonstration of oral, writing and communication skills

**PO2.** Encouraging interdisciplinary curriculum by cementing their basic knowledge in fundamental sciences.

**PO3.** An envisioning of value based education for strengthening their personal development.

**PO4** Hands on technical as well as experimental skills to complement their theoretical knowledge in the curriculum.
PO5. Students will hold research skills to make them competent as a candidate for various opportunities in India and across the world.

**Programme Specific Outcomes**

The Undergraduate program in Microbiology involves the study of the biology of bacteria, viruses, protozoa, and fungi. Research by microbiologist is essential for the future battle against diseases worldwide and to exploit microbes in the production of food. Students will gain a broad introduction to biological sciences, covering key concepts such as microbiology, virology, parasitology, biochemistry, genetics, molecular biology, etc. The central emphasis of this undergraduate course is focused on exploring the pathogenic potential of the organisms that cause disease in man. Students will spend the first year learning the fundamental concepts before specializing in microbiology topics in their second year. Students work on an independent in-depth research project that may involve practical work in a laboratory, bioinformatics or other topics under the supervision of a research guide giving them the opportunity to perform techniques that are extensively used in recent research in biological science.

**Semester 1**

MIC103    INTRODUCTORY BIOLOGY    credits: 3

**LEARNING OBJECTIVE:**

The course introduces the principles of molecular biology, cell biology, genetics, evolution, basics of protein sorting, Importance of cytoskeleton remodelling and their role in disease conditions
SYLLABUS

Introduction

PART 2

PART 3

REFERENCES:

Textbook:

COURSE OUTCOMES:
1.  Understand the importance of Interdisciplinary Biology
2.  Understand about evolution of life and how genetic information is transmitted in organism. Additionally, the students are encouraged to make a scientific Inquiry by framing and testing hypothesis.
3.  Understand about cell theory and different cell organelles and their function.
4.  Understand the role of cytoskeleton and its remodelling including the diseases associate with improper remodelling.

CHY103 CHEMISTRY credits: 4

COURSE OBJECTIVE

The main objective of the course is to make the students understand the basic theories, laws and
mechanisms of the chemistry and further to make them prolific in extending this basic knowledge in to the understanding and development of the bio-chemistry and related interdisciplinary fields.

**SYLLABUS**

**Chemical bonding**
Introduction to bonding, Classification of elements in the periodic table, Periodic properties, Types of bonds & factors affecting the bond formation, bond parameters, Polarity of bonds, semipolar bonds

**Solutions**
Solutions, types of solutions, solvation energy, lattice energy, Equivalent & molecular mass, mole concept, solubility & factors affecting solubility, Expression for concentration of solutions, polarity of solvents, Importance of dielectric constant of solvents, Solvents other than water, classification of solvents, Dilution factor, serial dilution, Solute–solvent interactions in solutions.

**Chemical equilibrium**

**Organic Chemistry**
Introduction to functional groups, chemical & physical properties, Reaction intermediates in organic chemistry, Electronic effects in organic compounds, Aromaticity with examples, SN1 & SN2 mechanism, Nucleophilic addition & substitution reactions at carbonyl group, E1 & E2 reactions in alcohols, Heterocyclic compounds, Configuration & projection formula, Optical & geometrical isomerism, Tautomerism & its applications

**Chemical kinetics**
Rate of reaction, differential rate law expressions, Order & molecularity, rate constant, integrated equations (1st, 2nd & 3rd order), nth life of a reaction, Arrhenius equations, temperature dependence of rate constant, energy profile diagrams. Reaction intermediates, Different theories on reaction rate

**Coordination Chemistry**
Introduction to co-ordinations compounds, Crystal field theory, Colour & magnetic properties of complexes, Chelation & applications, biologically relevant co-ordination compounds

**Electrochemistry**
Electrode potential, related problems, Nernst equation & its applications, emf of the cell, related problems, Redox reactions in cells, free energy change & standard emf of the cell, Redox titrations applications with two examples
REFERENCE:

COURSE OUTCOME

This course covers the fundamental principles, concepts and laws of chemistry and general mechanisms of the chemical reactions. Topics include chemical bonding, stoichiometry, chemical equilibrium, kinetics, electrochemistry, coordination chemistry, and organic chemistry. After completion of this course students will be thorough in the basic chemistry and will be able exercise applied sciences and interdisciplinary areas of sciences such as biochemistry, with the help of basic principles and mechanisms discussed in this course.

ENG 100 ENGLISH CREDITS: 3

COURSE OBJECTIVE

To provide the students with an ability to build and enrich their communication skills. To make them familiar with different types of communication. To understand the barriers to effective communication

Engage students in meaningful communication through effective tasks. Identify the basic principles of communication. Analyse the various types of communication. Make use of the essential principles of communication. Identify the prominent methods and models of Communication.

SYLLABUS

LANGUAGE LEARNING: English as Second Language, Developing the essential skills of English

A SELECTION IN POETRY: To daffodils (Robert Herrick), Yussouf (J R Lowell), Ozymandias (P B Shelley)

The slave’s dream (H W Longfellow), The Ballad of Father Giligan (WB Yeats), Elegy (extract) (Thomas Gray), The Fly (William Blake)

LANGUAGE PRACTICE (Basic grammatical categories for communication). Parts of speech, Determiners, Modal auxiliaries, Tenses, Phrasal verbs, Connectors expressing purpose, means, cause and effect, comparison and contrast, Concord of number, person, gender, pronoun and antecedent, Voice: Impersonal passive, Modifiers, Nominal compounds, Abbreviations and acronyms, Spelling and Affixation, Punctuation
REFERENCE:

1. Doff, Adrian and Christopher Jones. Language in Use. Upper Intermediate. CUP, 1999

COURSE OUTCOME

1. Prepare the students to seek and find employment in the corporate, media, English language teaching and content writing sectors
2. Develop communicative competence in students
3. Impart knowledge, ideas and concepts in the technicalities of proper pronunciation, structure, appropriate use and style of the English Language as well as the application areas of English communication
4. Expose the students to the employment opportunities, challenges and job roles. To enable the students to conduct independent surveys, collect and analyze data, prepare and present reports and projects
5. Guide the students to establish self-employment strategies.

MIC 100 INTRODUCTORY MICROBIOLOGY CREDITS 3

LEARNING OBJECTIVE:

A Basic course introducing the prokaryotic world with specific reference to the metabolic, physiological and morphological characteristics of microbes.

SYLLABUS:

Basic concepts– Spontaneous generation, Germ theory of diseases, Cell theory. Contributions of Antonie van Leeuwenhoek, Joseph Lister, Robert Koch, Louis Pasteur, Edward Jenner, John

REFERENCES:

COURSE OUTCOMES:

1. To expose students to the pioneers in microbiology and introducing their contributions.
2. To detail the prokaryotic cell and related organelles and their functions.
3. To introduce the concept of microscopy and to elaborate of few basic microscopy techniques.
4. To elaborate on microbial nutrition and methods of determining growth curve.
5. To introduce the basic principles of sterilization methods.

CSA100 INFORMATION SYSTEMS credits: 3

LEARNING OBJECTIVE:
To provide relevant skill sets on basic computer knowledge. The broad topics include training on applications like worksheets, word process, databases, fundamental concepts of operating systems and computer network is also covered in the course.

SYLLABUS:

REFERENCE:

Reference Books:

COURSE OUTCOMES

1. Students will be having an understanding of different components, signals, microprocessors, input/output devices et.
2. The course enables the students to understand the IT applications in the area of biology
3. They will be knowing the fundamentals of programming, making graphs and plots for scientific data etc.
4. On completion of the course, students should have acquired essential knowledge to meet their computational requirements as a life sciences aspirant.

CUL101 CULTURAL EDUCATION-1 CREDITS 2

SYLLABUS

The Necessity of CE- Education for life and Livelihood, Role of spirituality in Indian culture, Science and Spirituality, Motto of Amrita University, Meaning of college prayer

Culture and Civilization- Definitions, Differences, Relation of culture and Values, Indian culture- Uniqueness and the pillars of Indian culture, Purusharthas or Goal of life Dharma, Artha, Kama, Moksha.

Man and Nature- Depletion of natural resources-Root causes, Our ancestors life-Harmony with nature, Pancha yajnas and Pancha matas, Reestablish the lost harmony, role of religion. Rishis and scientist, India’s Ecological heritage- Vedic view of nature, Sacred groves, Causes of destructions and solutions

Introduction to Vedas and Vedanta – Fourteen Abodes, Four Vedas, Samhitas, Brahmans, Aranyakas, Upanishads, Six Vedangas, Four Upavedas

Vedanta and Image worship, Sadhana and self realization, Imbibe principles of Vedanta

REFERENCES:

Text Books:
MIC 180  INTRODUCTORY MICROBIOLOGY LAB  CREDITS 2

LEARNING OBJECTIVE:

The main objective of this course is to provide basic knowledge to undergraduate students on various microbiological practices in the laboratory.

Basic lab practices in Microbiology: Sterilization, Disinfection. Culture media preparation of solid, semi solid and liquid media, inoculation in slant, deep and plate. Identification of normal flora using swab, Pure culture techniques: Streak plate, Serial dilution, spread plate and pour plate procedures. Determining the cultural characteristics of microorganisms in plate and growth pattern in slant and broth. Staining techniques: Simple, differential and structural stains: Gram staining, Negative staining, Capsule staining, Spore staining, Motility determination: Hanging drop

REFERENCES:

Text Books:

2. Laboratory Exercises in Microbiology-Harley Prescott

Course Outcome:

1. Understand the physical and chemical method of sterilization.
2. Understand the methods of cultivation of microorganisms
3. Understand different staining methods

Semester 2

PHY103  PHYSICS  CREDITS:4
Learning Objectives:

Physics course offered to under graduate students by School of Biotechnology is a basic course which builds a bridge between physics and Biology. The learning objectives of the course are to develop. Knowledge and ability to use various problem-solving strategies of physics to Biology. Ability to justify and explain specific approaches to solving problems. Ability to synthesize knowledge from different areas of physics and apply it to biological situations. Ability to work in teams for written and oral communication skills

Mechanics: Motion along a straight line, motion in two and three-dimension, projectile motion, circular motion, relative motion. Force, Friction, Work, energy, power. System of particles, collisions, Rotational motion, combined rotational and translational motions.

Dielectrics and Magnetism: Properties of dielectrics, non-polar and polar dielectrics, Dielectric strength, Ferroelectrics, Piezoelectric, applications. Magnetic materials: Magnetism, magnetic materials, classification of magnetic materials, types of magnetic materials, soft magnetic materials, hard magnetic materials, applications.

REFERENCES:
Textbooks:

REFERENCE BOOKS:

Course Outcome:

1. Students are able to categorize different types of motions.
2. They are able to relate work, energy and power.
3. They compare translational motion and rotational motion.
4. Solves problems on waves and oscillations.
5. They integrate the different phenomena’s due to light such as reflection, refraction, interference, dispersion and diffraction.
6. The students distinguish the properties of matter such as solids, liquids and gases.
7. The students are able to compares and relates the Dielectrics and magnetism.

MIC101 MICROBIAL ECOLOGY, DIVERSITY & CLASSIFICATION CREDITS: 3

LEARNING OBJECTIVE

The course should enable the students to -1. Familiarize the students with physiological diversity of microorganisms and Microbial taxonomy decipher the roles and characteristics of various microorganisms. 2. To get requisite knowledge about the habits and habitats of microorganisms. 3. To evaluate explicitly the Nutritional requirement of microorganisms. 4. Get insight into the various applications of microorganisms, such as bioremediation, composting.

SYLLABUS
MICROBIAL CLASSIFICATION AND BASICS OF MICROBIAL DIVERSITY

Five kingdom classification of microbes, definition of microbial diversity and mode of evolution; microbial phylogeny; structural diversity of microbes, Physiological diversity of microorganisms; prokaryotic diversity; eukaryotic microorganism; Microbial taxonomy, Phylogeny of Archea; extremophiles; commercial uses of extremophiles; microbial diversity and its application in modern science

HABITS AND HABITAT: Principles of microbial ecology, nutrient acquisition, microbial competition and antagonism, environments and micro environments, Association of microbes with eukaryotes, Rumen micro flora, Aquatic habitats: Marine and fresh water; terrestrial habitats; key nutrient cycles: Carbon, Nitrogen and Sulphur.

Applications

Microbial bioremediation, bioleaching, biodegradation, biomining.

REFERENCE:

1. Microbial Diversity, D.Colwd
2. Microbial Ecology, J.M.Lynch and N.J.Poole

COURSE OUTCOME

The students should be able to- 1. Clearly distinguish various microorganisms, know their habitat and also discern the nomenclature. 2. Thoroughly know the microbial diversity in the various biomes. 3. Identify Aquatic as well as Marine habitats and how humans have impacted the environment. 4. Postulate applications of microorganisms, such as in bioremediation, biodegradation etc. 5. Employ microorganisms for pollution abatement and various other environmental application

BIO103 BIOCHEMISTRY CREDITS 3

Learning objective:

This course deals with the concepts of chemical bonding and principal biochemical reaction mechanisms so that the students can apply in the domains of metabolism, enzyme technology, structural biology, molecular biology and bioinformatics

SYLLABUS:
Basic Organic Chemistry: Introduction- Important elements in biology, concept of hybridization
Shape of water and ammonia molecules Acids and bases, pH, Henderson- Hasselbalch Equation, Buffers, Important functional groups in organic chemistry, Non-covalent interactions, General types of reactions in Biochemistry, Electrophiles and nucleophiles in biological system,

**Amino Acids and Proteins:** Introduction, Classification Optical isomerism, chemical properties, Acid-base properties- polyionic nature, zwitter ions, pKa’s, pi, Peptide bond formation and properties, Classification of proteins. Levels of protein structure (brief mention of primary, secondary, tertiary & quaternary structures, Denaturation of Proteins.

**Carbohydrates** Introduction, Sources, Classification into mono, di and polysaccharides. Classification of monosaccharides based on no. of carbon atoms.), aldoses and ketoses, Fischer projections, Haworth structures, Anomers, Epimers, Structure and functions of sugars, Disaccharides, Polysaccharides, Glycoconjugates.

**Nucleic Acids** Structures of purine and pyrimidine bases Nucleosides, nucleotides, RNA, & DNA Types of RNA Structure of DNA, Watson and Crick model, DNA denaturation, Hyperchromic shift, Aminoacyl tRNA synthetase

**Lipids** Introduction, sources, Nomenclature Classification, Properties & Functions ,Fatty acids, Triacyl glycerols, Membrane lipids, Glycerophospholipids and sphigophospholipids, Steroids, Structure of steroid nucleus, Biological role of Cholesterol, fat soluble vitamins, Biological Membranes

**Reference Books**

**Course Outcome:**

1. To understand the concepts of basic Chemistry including principles of chemical bonding, hybridization, shape of water and ammonia. Acids, bases, buffers, Preparation of buffers, Non-covalent interactions and general types of reactions involved in biochemistry.
2. Identify and write the chemical structure of Amino acids and depict their ionisation behaviour, Peptide bond formation; describe the Primary, Secondary, Tertiary and Quaternary structure of proteins and their functions.
3. Analyse the structure and properties of Carbohydrates, Monosaccharide, Disaccharides and polysaccharides, Glycoconjugates.
4. Identify and analyse the classification, Structure and properties of lipids including Storage lipids,
Membrane lipids, Steroids etc.

5. Identify and know the chemical structure of nucleotides including their components, describe primary, secondary structure of DNA and RNA.

ENG101 ENGLISH/CREATIVE WRITING & SOFT SKILLS CREDITS 3

Learning Objective

To provide the students with an ability to build and enrich their communication skills. To make them familiar with different types of communication. To understand the barriers to effective communication. Engage students in meaningful communication through effective tasks. Identify the basic principles of communication. Analyse the various types of communication. Make use of the essential principles of communication. Identify the prominent methods and models of Communication.

Text-English and Soft Skills-S P Dhanavel

(Comprising different authors representing different stories each dealing with a soft skill)

CLASS ACTIVITY –

REFERENCES:

1 English for students of Science – Orient Longmans
2 Spoken English for you – Emerald
3 English Basics (a companion to grammar and writing) – Cambridge
Course Outcome:

- Prepare the students to seek and find employment in the corporate, media, English language teaching and content writing sectors.
- Develop communicative competence in students.
- Impart knowledge, ideas and concepts in the technicalities of proper pronunciation, structure, appropriate use and style of the English Language as well as the application areas of English communication.
- Expose the students to the employment opportunities, challenges and job roles. To enable the students to conduct independent surveys, collect and analyze data, prepare and present reports and projects.
- Guide the students to establish self-employment strategies.

MAT100 MATHEMATICS CREDITS 4

Learning Objective:

Mathematics is a course offered to 2ndt semester B.Sc., (BT & MB). The course deals with linear algebra, differential equations, basic calculus, statistics etc. As an area of study, it has a broad appeal in that it has many applications in different aspects of biology.

SYLLABUS:

**Linear Algebra:** Matrices-definition, Types of matrices, Addition and subtraction of matrices, Multiplication of matrices, Properties of matrix multiplication, Transpose of a matrix, Symmetric and Skew-symmetric matrix, Orthogonal matrix, Adjoint of a matrix, Singular and Non-Singular matrix, Inverse of a matrix, Rank of a matrix, Cramer’s rule, Eigen Values and Eigen Vectors, Cayley Hamilton Theorem, Sequence and Series Sequence-definition, Arithmetic progression, Geometric Progression, Harmonic Progression, Infinite series, Sum to infinity, Matrices, Determinants and properties of determinants, Minors and co-factors,
Basic calculus: Functions, Limits-definition problems Continuity-definition, properties, Continuity on an interval and continuity of polynomials, continuity of rational functions Differentiation- Slopes and Rate of change Product rule, Quotient rule Derivative of rational powers of x, Implicit differentiation Indeterminate forms and L Hospital rule Integration – Indefinite integral Integration from the view point of differential equations, Integration by substitution, Area as a limit of a sum, The definite integral,

Differential Equation: Differential Equations Definition, Initial and boundary value problems, Classification of First order differential equations, Linear equations, Bernoulli’s equation, Exact equations Separable equations, Homogeneous equations,

Statistics: Statistics, Collection, Classification and Tabulation of data, Bar diagrams and Pie diagrams, Histogram, Frequency curve and frequency polygon, Ogives Mean, median, mode, Standard deviation.

REFERENCES:

Text Books:

1. Anton-Bivens-Davis “7th Edition Calculus” WSE WILEY

Reference books

3. Seymour Lipschutz, Marc Lipson “Schaum’s Outlines Of Probability” MCGRAWHILL 2000 2nd

Course Outcome:

1: To understand the concepts.
2: To solve the problems by using properties.
3: The difference between any two consecutive terms is the same.
4: Find the general solution to a linear first order differential equation.
5: To solve the problems by using different methods. CO6: To find the area by using integration.

CUL102 CULTURAL EDUCATION-2 Credits 2

Learning Objective:

Relevance of Srirama and Sri Krishna in the scientific age, Lessons from epic of India. Ramayana and Mahabharata, Vidura neeti- Wise man, Rulers dharma, Story-King Shibi
Karma- Role and theory of re incarnation, Bagavad gita –Introduction, Action without desire

SYLLABUS:

Awakening of Universal motherhood, Role & Position of Women in Indian Society – Great women of India, rishikas in the Vedas, women characters in the epics, decline of women’s status.

Indian Society: Its Strengths and Weaknesses – family values, social values, community values etc., varnashrama, caste, dowry etc.

Overview of Patanjali’s Yoga Sutras with focus on value systems mentioned in Yama and Niyama- Yoga system for Personality refinement, Heroism and patriotism in Modern India.

REFERENCES:

Text Book:

Cultural Education: Reading Material for students - prepared by Cultural Education Dept., Amrita Vishwa Vidyapeetham.

Mother of Sweet Bliss – a biography of Mata Amritanandamayi Devi

PHY182 Physical Sciences Lab credits: 2

Learning Objective:

Students will get the chance to revise the fundamental concepts like viscosity of liquid, conductivity, heat transfer and specific rotation of glucose.

SYLLABUS:
Name of the experiments

1. Preparation of standard & dilute solutions.
2. To determine the solubility of an organic acid in water at room temperature.
3. Acid base titration using pH meter
4. To study the rate of a chemical reaction-2
6. Identification of functional groups.
7. Determination of Viscosity of Organic Solvents by Ostwald Viscometer
8. To study the Effect of urea on the viscosity of BSA using Ostwald Viscometer
9. Measurement of heat changes using a calorimeter
11. Measurement of emf of an electrolyte at a given temperature
12. To find the specific rotation of sugar solution using polarimeter

REFERENCES:

Virtual Labs in Chemistry

2. Emf measurement.
3. Water Analysis –Determination of chemical parameters
4. Determination of specific conductivity of soil
5. Crystal field theory of complexes

Reference:
http://amrita.vlab.co.in

Course Outcome:

1. To get the idea about how to handle the chemicals.
2. Students will get the exposure to use the equipments like weighing machine, Ostwald Viscometer, polarimeter, pH meter, conductivity meter, calorimeter etc.
3. Students will get the chance to compare the theoretical values and practical values.
4. They can improve their hands-on skills.
Learning Objective:

This course deals with basic biochemical calculations and preparations of various reagents, qualitative and quantitative analysis of both carbohydrates and amino acids, chromatography techniques.

SYLLABUS

List of Experiments

1. Preparation of Laboratory Solutions and Buffers
2. Estimation of amino acids by ninhydrin method
3. Separation of aminoacids using TLC
4. Isoelectric precipitation of casein from milk
5. Qualitative analysis of carbohydrates
6. Qualitative analysis of amino acids
8. Verification of Beer-lamberts law using potassium dichromate

REFERENCES:

Course Outcome

Students will get practical exposure to commonly used biochemical techniques and also they become familiar to use instruments like calorimeter, pHmeter etc.
Semester 3

BIO202 MOLECULAR BIOLOGY CREDITS:3

Learning Objective:

Introducing and strengthening the basic molecular processes that are common to all living organisms. This course will form the pillar of knowledge which in turn help the students for better understanding of various other subjects in the field of biotechnology.

SYLLABUS

Discovery of DNA as genetic material, Griffith’s experiment, Hershy and Chase warrring blender experiment, Chargaff’s rule, Structure of DNA, RNA and Protein Basic mechanism of replication, transcription, translation, Gene regulation in prokaryotes and eukaryotes, positive regulation, negative regulation, attenuation, gene regulation in lambda phage life cycle, RNA processing and post transcriptional regulation Eukaryotic transcription factors, enhancers, silencers, insulators, chromatin structure and gene regulation, Translational regulation in prokaryote and eukaryotes, Post translational modification and protein stability

REFERENCES:

Text books.

1. Molecular biology of gene, J.D.Watson
2. Gene VIII, Benjamin Lewin
3. Molecular biology, David Freifielder

Course Outcome:

1. Learn and understand the important discoveries that are made in the field of molecular biology.
2. CO2. Understand the detailed structure of the double helical nature of DNA as proposed by scientists like Watson and Crick.
3. To learn different levels of organizations that regulate the condensation of DNA that leads to the compact metaphase chromosome.
4. To learn key molecular events that occur during the transcription and translation processes that lead to the protein synthesis from specific genes.
5. Understanding the mechanisms that regulate the regulation of gene expression in both prokaryotes and eukaryotes.
6. Learn about the molecular events that happen during the replication of DNA prior to the cell division.

MIC 206 MYCOLOGY CREDITS 3

COURSE OBJECTIVE

Learn about the importance of fungi in ecosystem, Pharmaceutical industry, agriculture, health sectors, food industry etc. Also learn about their classification, toxins produced by fungi, mushrooms and its health benefits, Toadstools. the symptoms, pathogenesis and identification method for the diseases causes by fungi.

SYLLABUS

Host responses to fungal infection-Immunity Antifungal agents

REFERENCE:

1. Introductory mycology, Alexopoulos, et al

Reference books

1. Fungal Biology by J W Deacon
3. Medical Mycology and Human Mycoses -- by Everett Smith, Ph.D. Beneke, Alvin Lee, Ph.D. Rogers
COURSE OUTCOME

1. Understand about the importance of fungi in ecosystem, agriculture, pharmaceutical industries, food industries and in health sectors. 2. Understand the general characteristic features of fungi. 3. Understand the fungal classification and its morphological characteristics. 4. Students understand how to identify a disease caused by fungi.

MIC214 MICROBIAL PHYSIOLOGY & METABOLISM Credits: 4

LEARNING OBJECTIVE

The course provides fundamental understanding about the growth and nutrition requirements of prokaryotes and their adaptation strategies. The course helps the students to understand the different metabolic pathways and their energetics.

SYLLABUS

Lipid Metabolism: Beta – oxidations of saturated fatty acids. Ketone bodies, production during starving and diabetes Biosynthesis of fatty acids – Acetyl-CoA carboxylase reaction, Fatty acid synthase complex, biosynthesis of palmitate, energetics, Regulation of fatty acid biosynthesis. Biosynthesis of cholesterol, regulation.

Amino Acid/ Nucleic Acid Metabolism: Biodegradation of amino acids – deamination, transamination, decarboxylation, urea cycle including its regulation. Biosynthesis of amino acids, Disorders of amino acid metabolism (phenylketonuria, alkaptonuria, biologically active amines Recycling of Purine and Pyrimidine nucleotides by salvage pathways. Lesch-Nyhan syndrome & Gout.
Reference Books

COURSE OUTCOME

1. To understand basics of microbial growth requirements.
2. To designate fundamentals of prokaryotic cell division.
3. To designate prokaryotic signal transduction network involving physiological processes including chemotaxis and biofilm formation.
4. To learn about adaptation capabilities of bacteria to stress environments.
5. Students will be able to understand the different metabolic pathways including carbohydrate, fatty acid, amino acid metabolism etc.
6. Students will be able to analyse the energetics and regulatory aspects of different metabolic pathways.

BIO206 ANALYTICAL BIOCHEMISTRY CREDITS: 3

LEARNING OBJECTIVE

The main objective of this course is to provide basic knowledge to undergraduate students on various analytical tools to understand structure and functions of biomolecules.

SYLLABUS

Methods of protein extraction, Protein quantitation: Biuret, Lowry, BCA and Bradford methods, Protein precipitation: Salting-in, Salting-out, Effect of organic solvents and polymers, Selective denaturation, Protein separation: Dialysis, Ultrafiltration, Centrifugation.

Electrophoresis: Native PAGE, SDS-PAGE, Isoelectric focusing, 2D-PAGE,

Spectroscopy: Fundamentals of UV Spectroscopy, Spectrophotometer, Applications of UV/Vis
spectroscopy, Fundamentals of fluorescence spectroscopy, Jablonski diagram, Spectrofluorometer, Applications of spectrofluorimetry.

REFERENCE:

1. Biochemistry: Voet and Voet
2. Protein Purification Techniques: Simon Roe
3. Protein Purification: Robert K. Scopes
4. Physical Biochemistry: David Sheehan
5. Practical Biochemistry: Keith Wilson and John Walker
6. Mass Spectrometry for Biotechnology: Gary Siuzdak

COURSE OUTCOME

1: Introduce the primary steps in biomolecules (focus on proteins) purification which includes various methods in isolation and quantitation of proteins.

2: Learn how to separate proteins from a heterogeneous mixture.

3: Learn to apply important chromatographic techniques to purify biomolecules

4: Familiarize the working principles of electrophoresis and UV/Vis and fluorescence spectroscopic techniques and application of the knowledge to get basic structural information of proteins

MIC205 VIROLOGY CREDITS: 3

LEARNING OBJECTIVE

Introducing students to the fascinating world of viruses with special emphasis on their general properties, replication strategies, cultivation methods, diagnostic tools, transformations, immune response and antiviral drugs. Virology course is mainly focused on the study of various types of viral pathogens, advanced study of viruses with regard to the basic, biochemical, molecular, epidemiological, and clinical, aspects of animal viruses primarily and bacteriophage, plant viruses, viroid’s, and prions. The viral vectors and their applications in biotechnology are also discussed

SYLLABUS

techniques

HOST RESPONSE AND ANTIVIRAL AGENTS: Immune responses to viruses, Interferon and other cytokines, Antiviral therapy.

REFERENCE:

1. Basic Virology – Edward K Wanger
2. Matthew’s Plant virology
3. Fundamentals of molecular virology – Acheson and Nicholas H

COURSE OUTCOME
Students will be able to access the reason for studying viruses
Understand how to cultivate, purify and detect the presence of viruses
Understand the replicative strategies of different classes of viruses
Understand the host immune response to viruses
Understand the pathogenicity and various antiviral drugs used to control viral infections.

MIC 281 GENERAL MICROBIOLOGY LAB CREDITS: 2

COURSE OBJECTIVE
To elaborate their knowledge in basic microbiology techniques and performing experiments to identify unknown bacteria by biochemical tests, fungal cultivation and staining, special media and

SYLLABUS
Culture Techniques-Spread plate, Pour plate and Decimal dilution.
Motility Determination-Soft agar deeps and Hanging drop method, Biochemical tests: IMViC test, Catalase test, Oxidase test, Triple sugar iron test, carbohydrate fermentation test ,urease test, fungal cultivation and staining .Identification of bacteria is using differential /selective media.

REFERENCE:

2. Benson’s Microbiological Applications by Alfred E. Brown
3. www.microbeonline.com
Course Outcomes:

1. To understand and perform pure culture techniques which includes Pour plate and spread plate.
2. To understand and perform various biochemical tests to identify unknown microorganisms, practical exposure to fungus cultivation and staining.
3. To understand the use of differential, selective and special media.
4. To perform isolation of bacteriophages from waste water.

BIO281 CELL AND MOLECULAR BIOLOGY LAB CREDITS: 2

Learning Objective

Hands-on experience to research in Cell Biology. Focuses on using microscopy to investigate various structural features of cells as well as understanding the state of the cells (resting/dividing). Lab also focuses on basic molecular biology techniques including DNA isolation and electrophoresis.

SYLLABUS:
List of Experiments

1. Accurate pipetting
2. Lignin Staining: comparison between monocots and dicots
3. Cheek cell Epithelium
4. Plant cell identification: Identification of stomata and chloroplast
5. Mitosis in onion root tip
6. Polyacrylamide gel Electrophoresis
7. Agarose gel electrophoresis
8. Genomic DNA isolation by CTAB method from different sources like leaf, flowers and fruits of plants
9. Spectrophotometry
10. SDS-PAGE (Polyacrylamide gel electrophoresis)

Reference:

Cell and Molecular Biology: Concepts and Experiments - Gerald Karp
Cell and Molecular Biology: A lab manual - K.V. Chaitanya

COURSE OUTCOME
1. Practical exposure to microscopy wherein the students will learn to differentiate between plant and animal cells and identify the deposition of lignin in plants using various staining techniques.

2. The various stages of mitosis will be analysed and visualised using the actively dividing cells present at the root tip of Allium cepa.

3. Practical exposure to genomic DNA isolation using various plant tissues and standardising the protocol for each of these tissues.

4. Understand the method to assess the quality of DNA using Agarose gel electrophoresis and well as spectroscopic methods.

5. Understand the basis of separation of proteins using polyacrylamide gel electrophoresis.

6. Basic introduction to animal cell culture

AVP201 / AMRITA VALUES PROGRAMME I

AVP211 / AMRITA VALUES PROGRAMME II

Amrita University's Amrita Values Programme (AVP) is a new initiative to give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.

Amrita Values Programmes emphasize on making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

Students shall have to register for any two of the following courses, one each in the third and the fourth semesters, which may be offered by the respective school during the concerned semester.

Courses offered under the framework of Amrita Values Programmes I and II

Message from Amma’s Life for the Modern World

Amma’s messages can be put to action in our life through pragmatism and attuning of our thought process in a positive and creative manner. Every single word Amma speaks and the guidance received in on matters which we consider as trivial are rich in content and touches the very inner being of our personality. Life gets enriched by Amma’s guidance and She teaches us the art of exemplary life skills where we become witness to all the happenings around us still keeping the balance of the mind.
Lessons from the Ramayana

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

Lessons from the Mahabharata

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

Lessons from the Upanishads

Introduction to the Upanishads: Sruti versus Smrti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

Message of the Bhagavad Gita

Life and Message of Swami Vivekananda

Brief Sketch of Swami Vivekananda’s Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji’s life.
Life and Teachings of Spiritual Masters India

Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahamsa, Swami Vivekananda, Sri Ramana Maharshi, Mata Amritanandamayi Devi.

Insights into Indian Arts and Literature

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

Yoga and Meditation

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanjali’s Yoga Sutra and Ashtanga Yoga. The coverage also includes the effect of yoga on integrated personality development.

Kerala Mural Art and Painting

Mural painting is an offshoot of the devotional tradition of Kerala. A mural is any piece of artwork painted or applied directly on a wall, ceiling or other large permanent surface. In the contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Kerala mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples and churches in South India, principally in Kerala. Ancient temples, churches and places in Kerala, South India, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

Course on Organic Farming and Sustainability

Organic farming is emerging as an important segment of human sustainability and healthy life. ‘Haritamritam’ is an attempt to empower the youth with basic skills in tradition of
organic farming and to revive the culture of growing vegetables that one consumes, without using chemicals and pesticides. Growth of Agriculture through such positive initiatives will go a long way in nation development. In Amma’s words “it is a big step in restoring the lost harmony of nature“. Benefits of Indian Medicinal Systems

Indian medicinal systems are one of the most ancient in the world. Even today society continues to derive enormous benefits from the wealth of knowledge in Ayurveda of which is recognised as a viable and sustainable medicinal tradition. This course will expose students to the fundamental principles and philosophy of Ayurveda and other Indian medicinal traditions.

Traditional Fine Arts of India

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is ‘Unity in Diversity” and it has led to the most diverse expressions of culture in India. Most art forms of India are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

Science of Worship in India

Indian mode of worship is unique among the world civilisations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realisation of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India.

Semester 4

BIO204 CELL BIOLOGY CREDITS: 3

Learning Objective
Provide in depth knowledge involving the basic concepts of cell biology including cell signaling, Cell-matrix interactions with specific emphasis on the components that make up the cytoskeleton. The course also includes understanding various mechanisms that govern the growth and regulation of cancer cells including the method to culture such cells.

**SYLLABUS:**

Cell Regulation: Basics of animal communications, Modes & Types of Cellular Signals, Receptors: GPCRs, RTKs, Cytokine Receptors & NRTKs, Enzyme linked receptors. Intracellular Signal Transduction Pathways, Cell Signalling and Cytoskeleton, Signalling Networks, Signaling in developmental pathways like Wnt, Notch and Hedgehog, Signaling in plants- Auxin, Ethylene and Phytochromes, Prokaryotic Signaling, Signaling involved in Circadian rythm in Humans, Drososphila and Cyanobacteria,

Advanced Cell Biology: Cell Cycle, Cell Death & Cancer, Cell Culture Techniques & Assays

**REFERENCES:**

**Text books**

**Course Outcomes:**
1. Understand how the proteins synthesised in the cytosol are transported to different organelles.
2. Understanding how cells co-operate and communicate with each other and the role of such signaling mechanisms in Cancer, Cell death and other pathological conditions.
3. Understand the regulation of cell cycle and cell death in Cancer. CO4: Understand the basic techniques used to culture animal cells.
LEARNING OBJECTIVE
Genetics is the study of heredity and genes. The aim of this course is to strengthen the Mendelian principles along with other molecular genetics topics like recombination, pedigree analysis, transposons. This course will help students to venture in to the different areas of biomedical sciences.

SYLLABUS

GENES, CHROMOSOMES & HERIDITY
Introduction, DNA as genetic material – Cellular Reproduction – Mendelism: Basic Principles

EXTENSION AND VARIATION OF MENDELISM
Chromosomal Basis – Variation in chromosome number & structure – Linkage, Crossing Over and Chromosome Mapping – Genetics of Bacteria and their viruses- Extra Nuclear Inheritance.

DNA, GENE EXPRESSION & GENOMICS
Molecular structure of DNA – Mutation, DNA repair & Recombination —Transposable elements – Regulation of gene expression – Cancer & Regulation of Cell Cycle

REFERENCE:

COURSE OUTCOME
1. To understand the basic concept of Mendelian principles and learn its application in different genetic experiments. This would help the students to solve the majority of the genetic problems.
2. To extrapolate the deviations from the standard mendelian laws in few cases and learning the mechanisms.
3. To learn the underlying genetic mechanisms that regulate sex determination and clinical cases leading into chromosome abnormalities.
4. To understand the principles of linkage, recombination and chromosome mapping to establish the physical and genetic connection between two neighboring genes.
5. Learning how DNA repair mechanisms restore the integrity following the DNA damage. 6. Applying statistical methods to obtain probability and genetic ratios in the Mendelian crosses.
Credits: 3

Learning Objective:

This course provides understanding about development and function of the immune system during health and diseases states of the body. We emphasize the molecular and cellular aspects of the immune system and response. Course covers innate and adaptive immune response and its components, Antibody and T cell receptor structure, function, molecular development and its genetics, Major histocompatibility complex, antigen presentation, B cell and T Cell activation and signaling, effector mechanisms, biology of vaccines, hypersensitivities, autoimmunity, immunodeficiency diseases, tumor and immunology.

SYLLABUS:

Historical perspectives in Immunology, Host-pathogen interactions; Introduction to the Immune System, Cells and Organs of the Immune system, Innate immune responses, Cells of the innate immune system, Inflammatory response, Antigen capture and presentation to lymphocytes, Antigen recognition in the adaptive immune system, Cell mediated Immune responses, Effector mechanisms of Cell mediated Immune responses

Humoral immune responses, Effector mechanisms of Humoral Immune responses, Immunologic tolerance and autoimmunity, Immune responses against tumors and transplants, Hypersensitivity reactions and diseases, Congenital and acquired Immuno-deficiencies

REFERENCES:

Text Book:

Basic Immunology: Functions and disorders of the Immune system, Abul K abbas, Andrew H Lichtman and Shiv Pillai

Reference materials:

Immunology, Kuby, by Kindt, Goldsby, Osborne, Sixth Edition.

Research articles and reviews from scientific publications.

Course Outcome:

1. Understand immune response in our body, both innate and adaptive, to different
pathogens, tissue injury and cancer.

2. Understand what happens if our immune system overreacts to foreign substances (hypersensitivities and allergies)

3. Understand what happens if our body recognizes self as non-self (autoimmunity)

4. Understand the biology of different vaccines against infectious agents and cancer and solutions to produce better vaccines

<table>
<thead>
<tr>
<th>BIO209 Enzyme Technology</th>
<th>CREDITS:</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td></td>
</tr>
</tbody>
</table>

**Learning Objective:**

To provide a detailed knowledge about enzymes, their chemical nature, kinetics, classifications, factors affecting the velocity of enzymes, theories of enzyme action, enzyme regulation, inhibitions, clinical enzymes, industrial enzymes, non-protein enzymes, coenzymes and cofactors.

**SYLLABUS:**

Specificity of enzymes, Active site, Allosteric site.

**Enzyme Catalysis and Inhibition:** Lock and key, Induced fit and Transition state Hypotheses. Mechanism of enzyme catalysis- Acid-base catalysis, covalent catalysis, Metal ion catalysis, Proximity and orientation effects etc. Mechanism of Serine proteases-Chymotrypsin, Lysozyme, Carboxypeptidase A and Ribonuclease., Proenzymes (Zymogens).

Reversible Inhibition- Competitive, Non Competitive, Uncompetitive, Mixed, Substrate, Allosteric and Product Inhibition.

Irreversible Inhibition- Suicide inhibition. Examples and Mechanism of various Inhibitors like Penicillin, Iodoacetamide and DIPF.

**Enzyme Regulation:** Feedback Regulation, Allosteric Regulation, Reversible Covalent Modification and Proteolytic Activation. Enzyme processing. Enzymes in post translational modifications.

**Industrial and Clinical uses of Enzymes (Applied Enzymology):** Industrial Enzymes- Thermophilic enzymes, amylases, lipases, proteolytic enzymes in meat and leather industry, enzymes used in various fermentation processes, cellulose degrading enzymes, Metal degrading enzymes.

Clinical enzymes- Enzymes as thrombolytic agents, Anti-inflammatory agents, streptokinase, asparaginase, Isoenzymes like CK and LDH, Transaminases (AST, ALT), Amylases, Cholinesterases, Phosphatases. Immobilization of enzymes, ELIZA. Biosensors. Enzyme Engineering and site directed mutagenesis, Designer enzymes

**Enzyme Structure activity Relationship (SAR) and Drug Discovery- Properties of Enzymes.:** Lead Compound, Structure based drug design, combinatorial chemistry, High-throughput screening, Case study of DHFR etc.

**REFERENCES :**

**Textbooks :**

Fundamentals of Enzymology : Nicholas Price & Lewis Stevens

Enzymes : Biochemistry, Biotechnology and Clinical Chemistry- Trevor Palmer

Biochemistry text books by Stryer, Voet and Lehninger (Relevant Chapters)

Proteins by Gary Walsh

Internet/Journal Resources

**Course Outcome:**

1. Introduce the term “enzyme” , history and classification
2. Learn about proteinaceous and non proteinaceous enzymes, their purification
3. Familiarise on mechanism of enzyme action-theories of enzyme action.
4. Learn how to define velocity/ enzyme activity/rate of a reaction and specific activity
5. Familiarise on factors affecting enzyme activity.
6. Learn about enzyme catalysis, Michaelis-Menton's constant.
7. Acquire knowledge about enzyme Inhibitions
8. Learn about enzyme regulations
9. Familiarise on enzyme degradation
10. Detailing on industrial and clinical enzymes.

MAT 201  BIOSTATISTICS  CREDITS 3

COURSE OBJECTIVE

Biostatistics is a course offered to 3st semester B.Sc., (BT &MB). We have considered distributions relating to a single characteristic. How far the two variables, corresponding to two characteristics, tend to move together in same or opposite directions. The theory of probability is a study of Statistical or Random experiments. Using these figures, it might be possible to estimate the possible level of prices at some future data so that some policy measures can be suggested to tackle the problems. Average is a value which is typical or representative of a set of data.

SYLLABUS

Collection, Classification and Tabulation of data, Bar diagrams and Pie diagrams, Histogram, Frequency curve and frequency polygon, Ogives. Mean, median, mode, Standard deviation.

Correlation and Regression analysis: Correlations and regressions:- Relation between two variables, scatter diagram, definition of correlations, curve fitting, principles of least squares, Two regression lines, Karl Pearson’s coefficient of correlation, Rank correlation, Tied ranks.

Probability theory: Random experiments, sample space, probability theory, conditional probability. Baye’s theorem.

REFERENCE:
3. Introduction to the Practice of Statistics by Moore and McCabe

COURSE OUTCOME

1: To understand the concepts.

2: To find r, ρ and study the nature of correlation and regression. Identify the different axiomatic approach.

3: To study and solve problems related to connectives under different situations.

4: To study the need of statistical approach Identify the different axiomatic approach.

5: To get a single value that describes the whole data and to study the variability of observation.

6: To understand the basic concepts of pmf and pdf

MIC207 FOOD MICROBIOLOGY CREDITS: 3

COURSE OBJECTIVE

Students are equipped with knowledge in techniques and experiments related to food safety and sustainability.

SYLLABUS

Food spoilage and food borne diseases: Common food borne pathogens, Entero pathogens and diseases. Applications of food microbiology: Microorganisms in Food Fermentation.

REFERENCE:

1. Food Microbiology. 2nd Edition By Adams
2. Modern Microbiology, James M.Jay
3. Fundamental Food Microbiology, Bibek Ray.

COURSE OUTCOME

To expose students to various methods of enumeration and identification of microorganisms in food.
To introduce the concept of food preservation with special emphasis to HACCP and criteria management. To increase awareness of spoilage pathogens in food and methods to control it. To summarize on all major food borne pathogens with special importance to bacterial pathogens.

SSD201 SOFT SKILLS -I CREDITS 1

Learning Objectives:

To improve the communication and presentation skills of students

SYLLABUS:

Introduction / Ice Breaking, Personal Visioning - Classroom Workshop,
Importance of assertive communication, Introduction to presentation Skills,
Assessment on presentation Skills.

Course Outcome

1. Basic understanding of the Soft skills sessions
2. Gain insights on setting objectives
3. Builds confidence to present in front of audience
4. Gains inputs to know to present self
5. Builds confidence to present in front of audience

BIO 282 Immunology Lab 2 Credits

**COURSE OBJECTIVE**

To expose the students to common laboratory assays, like blood grouping, agglutination reactions, ELISA (enzyme-linked immunosorbent assay), which detects the presence of antigen-antibody interactions in the body fluids.

**SYLLABUS**

Principles of Antigen-antibody interactions. Applications of antigen-antibody interactions in research Module 2: Blood typing by agglutination, Latex agglutination, Ouchterlony diffusion on gels for antibody titration, Diffusion experiments for testing common epitopes on antigens, ELISA

**REFERENCE:**

**COURSE OUTCOME**

1. To understand and identify the morphology of cells of the immune system. 2. To understand the basic concepts of blood grouping. 3. To understand antigen-antibody interactions and detect the presence of antigens and or antibodies in a biological sample. 4. To understand antigen antibody interactions and thus quantitate the presence of antigen and or antibodies in biological samples.
MIC283 FOOD MICROBIOLOGY LAB CREDITS: 2

COURSE OBJECTIVE

Exposure to food enumeration, quality control and food borne pathogen detection methods.

SYLLABUS

REFERENCE:

Laboratory exercises in Microbiology: John P Harley fifth edition
Fundamental Food Microbiology, Bibek Ray

COURSE OUTCOME

To provide experimental skills on food enumeration methods. Methods to identify quality control of food products and water. Methods to detect food spoilage pathogens.

SEMESTER 5

MIC 309 INDUSTRIAL MICROBIOLOGY CREDITS 3

COURSE OBJECTIVE

The objective of this course is to understand the basic skills applied in fermentation technology and use of biological resources as input to biobased processes which are economically and environmentally sustainable

SYLLABUS

Industrial Biotechnology, Introduction and history, Isolation and screening, Primary and Secondary screening, Production strains, Production media, Inoculum preparation and inoculum Development, Introduction to Fermenter, Industrial sterilization, Scale up fermentations, Types of fermenters (12 Types), Down stream processing of industrial products. Different types of product purification. Mode of fermenter operation, Industrial production of penicillin, production of streptomycin,

**Environmental Biotechnology** - Waste water treatment, Bioremediation, Genetically Engineered Microorganisms in Biotreatment of wastes, Biotechnological methods for pollution detection, Biosensors

**REFERENCE:**

1. Industrial Microbiology, A.H.Patel
2. Industrial microbiology, Casida

Reference Books

2. Industrial Microbiology by L.E Casida, John Wiley and sons INC.
3. Industrial microbiology by A.H.Patel, Macillan India Ltd.

**COURSE OUTCOME**

1: An introduction to fermentation process. Learn the history of fermentation process, types of fermentation, and examples of fermentation industry.

2: Design of a fermenter. Understand basic design of a fermenter. Important parts and materials required for aseptic operation and containment practice in a fermenter.

3: Types of Fermenter. Study the difference in design and functioning of different types of fermenters. Understand the advantages and disadvantages of different types of fermenters.

4: Mode of fermenter operation. Covers the basic concepts of microbial growth kinetic and stoichiometry in different bioreactor operational modes.
5: The isolation and improvement of industrially important Microorganisms. Understands the problems in isolation, strain improvement and growth of microorganisms in industrial processes.

6: The recovery and purification of fermentation products. Learn the techniques involved in the extraction and purification of high-quality fermentation products.

7: Effluent treatment. Understand the importance of proper waste treatment plant for fermentation industry. What are the different types of wastes produced and what are the different factors that need to be considered while selecting the treatment method.

MIC 312 Medical Bacteriology 3 credits

COURSE OBJECTIVE

To understand different bacteria which causes diseases to human

SYLLABUS

REFERENCE:

Medical Microbiology-David Green wood
Text book of microbiology,Ananthanarayan& Jayaram Panicker
Jawets-Medical Microbiology-Geo F.Brooks,Janet S Butel.

Reference book:

Manual of Clinical microbiology-Murray,Baron
Baily and Scot’s Diagnostic MicrobiologyForbes,Salim,Weissfeld
Mim’s Medial Microbiology-Georing,Dockrell.
Foundation and principle of bacteriology-A.J.Salle
COURSE OUTCOME

Understand about normal flora of human body, different gram positive bacteria, different gram negative pathogenic bacteria, acid fast bacteria and other important medically important bacteria includes spirochetes, campylobacter, Helicobacter etc.

MIC316 RECOMBINANT DNA TECHNOLOGY CREDITS: 3

COURSE OBJECTIVE

The course attempts to introduce the basic concepts of recombinant DNA technology namely Boyer and Cohen work flow of gene manipulation, restriction and ligation, plasmid and phage-based vectors, transformation techniques, site-directed mutagenesis and applications.

SYLLABUS

The Basic Principles of Gene Cloning and DNA Analysis Introduction, History, the advent and importance of gene cloning and the polymerase chain reaction, Vectors for Gene Cloning, Purification of DNA from Living Cells, Manipulation of Purified DNA, Introduction of DNA into Living Cells,

Vectors for Cloning

Cloning Vectors for E. coli, λ and other high capacity vectors, Cloning Vectors for Eukaryotes, Genomics & cDNA Libraries

Applications and Techniques of Gene Cloning

Polymerase Chain Reaction & qPCR, Electrophoresis & Blotting Techniques, Site- Directed Mutagenesis, DNA Sequencing, Reporter Gene Assays, DNA-Protein Interaction Assays, Protein-Protein Interaction Assays, DNA Fingerprinting.

REFERENCE:

COURSE OUTCOME

1. To help students appreciate the overarching work flow defined by Boyer and Cohen in order to perform gene manipulation. 2. To introduce the basic principles of plasmid and phage based vectors. 3. To introduce the concepts of gene and cDNA library. 3. Make the students accustom to working principles of chromosome walking and jumping. 4. To introduce the students to gene editing techniques. 5. Discussion on applications of recombinant DNA technology.

MIC317 ENVIRONMENTAL & AGRICULTURAL MICROBIOLOGY
CREDITS 3

COURSE OBJECTIVE

The course should enable the students to 1. Familiarize with the environment and ecosystems 2. Decipher the treatments for both solid waste as well as waste water 3. To get requisite knowledge about the habits and habitats of microorganisms and their implications in ecology 4. To evaluate explicitly the various biogeochemical cycles 5. Get insight into the various applications of microorganisms, such as bioremediation, composting.

SYLLABUS

**Industrial Microbiology**, Introduction and history, Isolation and screening, Primary and Secondary screening, Production strains, Production media, Inoculum preparation and inoculum Development, Introduction to Fermenter, Industrial sterilization, Scale up fermentations, Types of fermenters, Acetator and cavitator, product recovery, Industrial production of penicillin, production of streptomycin, Industrial production of organic acids- introduction, production of citric acid, production of lactic acid, Industrial production of enzymes, introduction; general aspects, production of amylases& proteases, production of nucleotides&nucleotides, production of alcohols-acetone-

butanol, production of ethanol, production of aminoacids -introduction, production of L- glutamic acid, production of vitamin B12, production of single cell proteins, production of yeast/ mushrooms, production of fermented foods, production of microbial insecticides, production of Biopolymers, Biofuels, biogas, production of Bioplastics, Biosurfactants, and Biofertilizers, General rules in patents and practices.

**Agricultural Microbiology** - Soil general properties, Microorganisms in soil –Decomposition of organic matter in soil-Biogeochemical cycles, Nitrogen fixation, Bacterial diseases of important crops, Biofertilizers and microbial insecticides
REFERENCE

1. Industrial Microbiology, A.H.Patel
2. Industrial microbiology, Casida

Books

2. Industrial Microbiology by L.E Casida, John Wiley and sons INC.
3. Industrial microbiology by A.H.Patel, Macillan India Ltd.

COURSE OUTCOME

The students should be able to 1. Thoroughly know the microbial diversity in the various biomes 2. Identify terrestrial as well as marine habitats and know how humans have impacted the environment 3. Decipher the use of biosensors for various environmental applications 4. Postulate application of microorganisms for pollution abatement and various other industrial applications.

BIO317 RESEARCH METHODOLOGY CREDITS 2

COURSE OBJECTIVE

This course introduces students to research mainly in field of Life sciences. The objective is to get them ready to do fruitful research during their final semester and also prepare for all India level competitions for Fellowship in Indian Academy of Science

SYLLABUS

REFERENCES:

**COURSE OUTCOME**

**SSD 301 SOFT SKILLS II CREDITS: 1**

**Learning Objective**
To improve confidence, presentation skills and communication skills of the students

**SYLLABUS**

Introduction / Ice Breaking, Personal Visioning, Personal Visioning - Classroom Workshop
Personal Visioning - Classroom Workshop, Self-Introduction, Importance of assertive communication, Importance of assertive communication, Introduction to presentation Skills, Discussion on presentation Skills, Assessment on presentation Skills, Assessment on presentation Skills, Concluding Session
Small activity, Familiarization of all members of the class, "Discussing the Questions, Why do we need a vision?, SWOT Analysis, SWOT as a decision making tool", "Further focus on students go deeper and do SWOT Analysis, list of achievements, 1 year action plan in the class", "Further focus on students go deeper and do SWOT Analysis, list of achievements, 1 year action plan in the class", "Sample Self Introductions, Self Intro Videos of examples", Communication merits: Body language and pitch & tone variations, "Articulation Skills: 3Cs of Communication, Verbal / Non-verbal, Written / Voice, Body Language - Video of Obama Speech, provocative questions to students and discussing on various gestures etc...Assertive + Persuasive", “- Public Speaking: Modi, Kalam, Language, Vision, Inspiration, Heart, Don’t imitate, be original, making some students to speak randomly, Impromptu speech, Fluency, Structure & content, How to practice public speaking”, Assessment on presentation Skills – Public presentation skills, Assessment on presentation Skills – Public presentation skills, "Concluding session: Pep talk - Practice, Practice, practice, Feedback"
COURSE OUTCOME

1. Basic understanding of the Soft skills sessions
2. Gain insights on setting objectives
3. Gain insights on setting objectives
4. Gain insights on setting objectives
5. Gains inputs to know to present self
6. Builds confidence to present in front of audience
7. Builds confidence to present in front of audience
8. Gains inputs to present in front of audience
9. Gains inputs to present in front of audience
10. Builds confidence to present in front of audience
11. Builds confidence to present in front of audience
12. Gains overall perspective of the course

MIC384 Medical Bacteriology Lab credits 2

COURSE OBJECTIVE

Learn about handling of pathogens, common diagnostics methods like staining, culture techniques, antibiotic sensitivity, and identification of pathogens

SYLLABUS

REFERENCE:

Color Atlas of Medical bacteriology-Luis M de la Maza,Marie T Pezzlo.

COURSE OUTCOME

Hands on experience in isolation of normal flora, antibiotic sensitivity test, acid fast staining,
negative staining, identification of unknown organism and widal test.

**BIO386**

**GENETIC ENGINEERING LAB**

**CREDITS: 2**

**COURSE OBJECTIVE**

The students will learn the theoretical and practical aspects of key molecular biology experiments like Plasmid DNA isolation, Restriction digestion, PCR, Competent cell preparation, Transformation, SDS-PAGE etc. Hands on experience will be given to all the students.

**SYLLABUS**

**List of Experiments**

1. Isolation of Plasmid DNA by Alkaline lysis method
2. Quantitation of DNA
3. Detection of Plasmid DNA by Agarose gel electrophoresis
4. Restriction Digestion Analysis
5. Competent cell preparation
6. Transformation and Efficiency of competent cells
7. SDS PAGE
8. Polymerase Chain Reaction
9. Isolation of Genomic DNA from Plants
10. Calibration of pipettes

**REFERENCE:**

2. Learn. Genetics. Virtual Lab / learn.genetics.utah.edu/
3. VALUE Virtual Lab / vlab.amrita.edu

**COURSE OUTCOME**

1: Hands on training for isolation of plasmids
2: Learn how to identify a plasmid experimentally.
3: Learn how to perform a restriction digestion followed by its mapping
4: Learn how a PCR works
5: Hands on experience on competent cell preparation and transformation.
6: Hands on training for assembling and performing SDS-PAGE

**MIC385 Industrial Microbiology Lab CREDITS: 2**

**Learning Objectives**

To provide hands on experience on isolating and evaluating the industrially potential of microorganisms from various sources. This course helps students to work with small scale fermentors and learn their basic working principle.

**SYLLABUS:**

**Experiments** Isolation and screening of antibiotic producers by crowded plate technique, Isolation of Actinomycetes from soil, Secondary screening protocols-Giant colony technique, Secondary screening protocols-Kirby-Bauer method, Isolation and screening of microorganism producing proteases, Isolation and screening of microorganism producing amylases, Isolation of Nitrogen fixers from soil, Isolation of phosphate solubilizers from soil, Immobilization of yeast in alginate beads for ethanol production, Production of citric acid.

**REFERENCE:**

**Course Outcomes:**

1. Understand various methods of screening industrially important microorganisms from different sources.
2. Understand the working of small scale fermenter and also determine the aeration efficiency of the fermenter Understand the technique of immobilization of cells like yeast and E.coli.
Semester 6

MIC 399 BRITE PROJECT CREDITS 7

Learning Objective

The project aims to expose the students to a short-term research experience. Through the process they learn to frame hypothesis, define objectives, collect relevant literature, design and perform experiments, data analysis and paper writing.

Course Outcomes

1. Help frame hypothesis.
2. Literature survey.
3. Hands-on experience with regard to different instrumentations and techniques.
4. Data interpretation and statistical analysis.
5. Paper writing.

BIO319 PHARMACOLOGY CREDITS 4

COURSE OBJECTIVE

To provide an understanding about the basic concept of drug discovery & designing, mechanism of action of different drugs, pharmacodynamics, pharmacokinetics, pharmacogenomics etc.

SYLLABUS

Fundamental Principles of Pharmacology, Fundamentals of Cardiovascular, Endocrine, and Immunopharmacology, Principles of Chemotherapy, Principles of Toxicology, Contemporary Approaches to Drug Discovery, Development and Delivery, Fundamentals of Drug Evaluation and Pharmacogenomics, FDA rules and regulations for the approval of new drugs, Major companies in the pharmaceutical industry, Biopharmaceuticals, Neutraceuticals, Economics of drug development. Receptor theory & kinetics, dose-response relationships, and mechanism of drug action; Phase I and phase II of drug metabolism, drug efficacy; pharmacokinetics concepts, Pharmacogenomics and Intellectual Property Rights with respect to Pharmaceuticals.

REFERENCE:
1. Pharmaceutical Biotechnology by Daan J. A. Crommelin, et al

**COURSE OUTCOME**

Students learn about drug discovery, mechanism of action of different drugs and get an idea about pharmaceutical research

**MIC311 PARASITOLOGY 3 CREDITS**

**COURSE OBJECTIVE**

To understand the common parasitic relationship in nature, focusing more on human parasite that cause diseases.

**SYLLABUS**

Parasitology-Introduction, Parasitic association, host parasitic interaction, Effect of parasitism in the host, Sources of parasitic infections. Classification, Introduction of protozoa (4 hr) , Protozoa-Amoeba Flagellates-Intestinal, Hemoflagellates, Sporozoa and Microspora(10 Hr)- Trematodes-Schistosoma haematobium, S.mansoni, S.japonicum (5 Hr) Cestodes-Intestinal Tapeworms and extra intestinal tape worm (7 Hr) Nematodes-Intestinal, Blood and tissues (8 Hr)

**REFERENCE:**

Human parasitology-Burton J Bogtish

**Reference Book:**

General parasitology-Thomas C Cheng
Medical parasitology-Markell and Voges
Foundation of parasitology-Roberts, Janovy.

**COURSE OUTCOME**

Students will have a basic understanding of the most important groups of eukaryotic parasites in vertebrates. Understand their life cycle, infection pathways and types of damage they inflict on the host.
BIF301 INTRODUCTORY BIOINFORMATICS CREDITS: 2

COURSE OBJECTIVE

To introduce to the field of bioinformatics via an array of publically available tools and resources

SYLLABUS

INTRODUCTION: Bioinformatics; Components; Different fields in bioinformatics; Omics; Biological Data Acquisition; Types of DNA sequences; RNA sequencing methods; Protein sequencing and structure determination methods; Gene expression data.

DATABASES: Format and Annotation: Conventions for databases indexing and specification of search terms; Common sequence file formats; Files for multiple sequence alignment; Files for structural data; Annotated sequence databases - primary sequence databases; Subsidiary data storage unfinished genomic sequence data, organisms specific databases; Protein sequence and structure databases ; List of Gateways, RNAi databases, Data – Access, Retrieval and Submission: Data Access - standard search engines; Data retrieval; Software for data building; Submission of new and revised data. NCBI resource; Databases

SEQUENCE ALIGNMENT: Sequence Similarity Searches: Sequence homology as product of molecular evolution; Sequence similarity searches; Significance of sequence alignment; Sequence alignment; Alignment scores and gap penalties; Measurement of sequence similarity; Similarity and homology. Methods of Sequence Alignment, Graphic similarity comparison; Dot plots; Hash tables; Scoring mutation probability matrices; Sequence similarity searches and alignment tools Heuristic Methods of sequence alignment, FASTA, BLAST and PSI BLAST, Multiple Sequence Alignment, Significance of multiple sequence alignment; Softwares ;Clustal package; Considerations while choosing a MSA software for analysis; Sensitivity and specificity of each software.

VISUALISATION TOOLS AND GENOME ANALYSIS: Pymol, VMD, Rasmol, Swisspdb viewer. Structure of genome ; Anatomy of genomes of virus, prokaryotes, eukaryotes; Human genome Genome Analysis, Whole genome analysis – shotgun sequencing, clone contig; Genomic library; Isolation and microdissection of chromosomes; Hybridisation methods - northern blot, southern blot, western blot; Genome identification Feature based approach – ORF’s; Primer Designing; Vector designing; APE

REFERENCE:

**COURSE OUTCOME**

Students should be able to apply basic bioinformatics tools for the studies and research in other areas of their biotechnology and microbiology programs, such as finding gene/protein homologs, designing primers, identifying mutations, etc.

Evaluation Scheme and Grading System

**CREDIT SYSTEM OF EVALUATION**

**Introduction**

Amrita School of Biotechnology follows a credit-based system for evaluation under a semester pattern. This allows flexibility on courses, time frame, teaching and learning, evaluation procedures and mobility.

**Academic year and Semesters**

An academic year (July to June) consists of two semesters and possibly a summer term. Each semester has a minimum of 80-85 teaching days and about 8-10 days for the end semester examinations.

**Credit based Academic System**

A credit-based system is a systematic way of describing an educational programme by attaching credits to its components. Credit is a way of quantifying the knowledge content. When enough credits are accrued or earned, the programme is completed successfully.

Credit system makes educational programmes easy to understand and compare both nationally and internationally. It facilitates mobility, academic flexibility and universality and helps universities to organize as well as reorganize their study programmes quickly. It can be used across a variety of programmes and modes of delivery.
Programme
An educational programme specializing in a specific area covers many knowledge segments. An example is the B.Sc. programme in Biotechnology.

Allotment of Credits

Credits are allocated to the knowledge segments giving due importance to their weightings. The sum of the credits allotted to the knowledge segments decides the programme credits. The programme is successfully completed from the academic angle, once the specified programme credits have been earned.

Example: (For a B.Sc. Biotechnology Programme)

<table>
<thead>
<tr>
<th>Knowledge Segment</th>
<th>Category</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Language, Cultural Education &amp; Soft Skills</td>
<td>S</td>
<td>17</td>
</tr>
<tr>
<td>Mathematics, Physics &amp; Chemistry</td>
<td>M</td>
<td>20</td>
</tr>
<tr>
<td>Core Lifesciences</td>
<td>C</td>
<td>67</td>
</tr>
<tr>
<td>Laboratory Courses</td>
<td>L</td>
<td>16</td>
</tr>
<tr>
<td>Project/Dissertation Thesis</td>
<td>P</td>
<td>7</td>
</tr>
<tr>
<td><strong>Total Credits for programme completion</strong></td>
<td></td>
<td><strong>127</strong></td>
</tr>
</tbody>
</table>
Under each knowledge component, the credits are again distributed among the identified courses. The number of courses and the credits allocated to each, could vary. However, the student need to get only the minimum credits in each of the components as mentioned in the example and a prescribed minimum total number of credits for successfully completing the academic programme. Additional credits taken will be an added advantage from the professional angle, but not from the academic requirements.

**Course Credits**

Each course, except for a few special courses, has a certain number of credits assigned to it depending on the lectures, tutorials, laboratory works and contact hours in a week. Lectures (L) and Tutorials (T) will have one credit per each contact hour in a week. Laboratory and Practical (P) classes carry one credit for two / three contact hours in a week. Projects, fieldwork etc are given a specific number of credits without any direct reference to the hours spent.

Example:

a) A Course on Plant Biology

Number of Lecture hours per week – 3  
Number of Tutorial hours per week – 1  
Total credits for the course  

\[ 3 + 1 = 4 \]

b) A Laboratory Course on Microbiology:

Number of Laboratory hours per week -3  

These are normally indicated in the curriculum, as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Course Code</th>
<th>Course Title</th>
<th>Hours per week</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>BIO223</td>
<td>Plant Biology</td>
<td>3 1 0</td>
<td>4</td>
</tr>
<tr>
<td>L</td>
<td>MIC281</td>
<td>Microbiology Lab</td>
<td>0 3 0</td>
<td>2</td>
</tr>
<tr>
<td>P</td>
<td>BIO399</td>
<td>Project</td>
<td>5 5 20</td>
<td>7</td>
</tr>
</tbody>
</table>

**Curriculum**

Curriculum is the framework of an academic programme. In the credit based system, curriculum will specify the category, course code, course title, course delivery (Lectures / Tutorials / Lab / Project) and the credits. Curriculum is presented semester-wise for convenience and will take into account all the knowledge segments and their assigned credits. The total credits to be earned for programme completion will be specified clearly. Our curriculum has the following credit allocations among the knowledge segments:

<table>
<thead>
<tr>
<th>Knowledge Segments</th>
<th>B.Sc. Biotechnology</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Category Admission</td>
</tr>
<tr>
<td></td>
<td>2016 Admissions</td>

<tr>
<td>Project/Dissertation Thesis</td>
<td>P</td>
<td>7</td>
<td></td>
</tr>
<tr>
<td><strong>Total credits needed for programme completion</strong></td>
<td></td>
<td><strong>128</strong></td>
<td></td>
</tr>
</tbody>
</table>

For the **M.Sc. programmes**, a total of 76 credits (Biotechnology), 76 Credits (Microbiology), 79 credits (Bioinformatics) have to be earned. 10 credits of project work have to be earned additionally for the successful completion of the programme.

**Credit System Flexibility**

Credit system allows flexibility on the selection of courses and time frame for completion of the programme. It also provides a good blend of teaching and learning, ensuring credible evaluation procedures and student mobility. The credit system is evolved around the teacher and the taught.

The prominent features of the credit system cover continuous evaluation of students’ performance through well-planned assessment procedures and the flexibility to allow a student to progress at a pace suited to his / her individual ability and convenience, subject to certain conditions. While a prescribed minimum number of credits are to be earned for the award of degree, a minimum level of performance is necessary for progressing with the studies.
Class Advisors and Counsellors
Each class will have one/two class counsellor(s) to help and guide the students in the academic process, solve their problems, if there is any, as also to provide counselling and guidance for the needy. They will also monitor the progress of the students in their studies and report the same to their parents periodically.

Checks and Controls in the Credit System
To achieve purposeful flexibility, a good system control is needed. Hence there are specific rules and procedures to be adhered to in the credit system. Certain courses in each knowledge segment are identified as core courses and others as electives. There is mandatory registration and credit earnings requirements for core courses. Electives are free to be chosen from those offered, for registration. While it is mandatory to register for the elective courses, failure to earn credits in them does not necessarily mean repeating the courses. Another elective course may be permitted as a replacement course.

Certain courses are pre-requisites for advanced courses. For example, Molecular Biology could be a pre-requisite for Genetic Engineering. This means that the student cannot take Genetic Engineering unless he/she has completed Molecular Biology. Here the term completion means that the student has registered for the course, done all assignments and tests, attended the class with 75% or more attendance and has written the end semester examination. The student need not have to earn credits (i.e., pass the course) for fulfilling the pre-requisite needs.

How to go about with the credit system?
The first step, in the credit based system, is the registration for the various courses. For first semester, registration is done at the beginning of the semester. In the subsequent semesters (2nd semester onwards), registration will be done at the end of the previous semester. The students have to enroll for the courses, earlier registered, at the start of the semester.

During enrolment, one can drop the earlier registered courses or add new courses, with the approval of the faculty advisor / Counsellor and the concurrence of the Dean of the School.

All students will have to register before a specified date. However for valid reasons, late registration with a fine will be permitted up to a specified date. These dates will be announced well in advance.

Registration
Students will be made aware of all information on the courses being offered in that semester. There will be an on-line registration procedure. The students have to enter the details of the courses they want to register for. In the first few semesters there may not be much of a choice to decide on. As one progresses, the flexibility will become more evident. Students have to consult the faculty members who have been identified as their advisors, for advice and assistance in registration.
Minimum and Maximum credits for which one can register in a semester is specified in the relevant curricula. Any deviations will need the approval from the Dean, School of Biotechnology.

A student is permitted to register / enroll for courses only if he / she has:

a) Paid all fees and has no dues to the university
b) Has maintained a progress, as required by the university
c) Has completed any pre-requisite courses prescribed
d) Has no disciplinary action pending against him / her

Conduct of Courses

Credit system encourages learning. Apart from regular class lectures, students will be given major assignments which will form a part of the course and will also be considered for evaluation. Seminars, design and other assignments, technical paper writing, quizzes etc. could also be a part of the course being conducted.

The teacher offering the course will evaluate the performance of the students at regular intervals and in the end semester examination. A class committee comprising all teachers handling all the courses for the class, the class advisor and students’ representatives will monitor the conduct of all the courses of a class.

A course committee comprising all teachers / mentors offering a course in all the campuses will decide on the course plan, evaluation procedure and any midway correction to be taken. Decisions taken by this committee will be informed to all students who have registered for the course. The class / course committees without students’ representative will finalise the grades and results for the class / course.

It is mandatory for the students to appear for the end semester examination / supplementary examination for the completion of the course.

If the Project work is not satisfactory, the student will be asked to continue the project till he / she completes it satisfactorily.

Attendance

- Additionaly, a 5% weightage is given to attendance above the total weightage
- All students are required to attend 100% of the classes.
- Leave of absence could be applied for in the form provided in the School website/Store and will be granted by Counsellor only in genuine cases.
- Two types of leave are permitted, namely, Duty Leave and Other leaves
- All leaves except Duty leave put together, as sanctioned by the Counsellor should not exceed 25% of the total classes, for eligibility to appear for the end semester examination.

- **Marks for attendance**
  i) 5 marks for 96-100% attendance
  ii) 4 marks
for 91-95% attendance

iii) 3 marks for 86-90% attendance

iv) 2 marks for 80-85% attendance

v) 0 mark for 75-79% attendance

vi) ‘FA’ for < 75% attendance

Students representing the University events either within the campus or outside the campus will be marked as present (OD). However, students should submit an OD form approved by Chairperson/Dean prior to attending the event. OD form submitted after the event will not be entertained and the student will be marked absent.

Grading System

<table>
<thead>
<tr>
<th>Grade Point</th>
<th>Grade</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>O</td>
<td>10</td>
<td>Outstanding</td>
</tr>
<tr>
<td>A +</td>

</tr>
<tr>
<td>W</td>
<td>-</td>
<td>Withheld</td>
</tr>
</tbody>
</table>

If the student secures ‘F’ grade in any of the courses, he/she can reappear for the supplementary exam.

If the student secures ‘FA’ grade in any of the courses, he/she has to re-register (redo) for the course when it is being offered next.

A student who has been awarded ‘I’ grade in the laboratory courses shall take up additional laboratory sessions during the first two months of the next semester and earn a pass grade, which will be reflected in the next semester’s grade sheet.

If a student is absent for the end semester examination, he/she will be allowed to reappear on proper evidence for his/her absence.
**Grade Point Average (SGPA)**
Based on the credits for which the student has registered and the grades awarded, Semester Grade Point Average [SGPA] and Cumulative Grade Point Average [CGPA] are calculated.

\[
SGPA = \frac{\sum (Ci \times GPi)}{\sum Ci}
\]

where \( Ci \) is the number of credits for \( ith \) course in that semester and \( GPi \) is the grade points earned by the student for that course.

**Cumulative Grade Point Average (CGPA)**
The overall performance of a student at any stage of the M.Tech. program is evaluated by the Cumulative Grade Point Average (CGPA) up to that point of time.

\[
CGPA = \frac{\sum (Ci \times GPi)}{\sum Ci}
\]

where \( Ci \) is the number of credits for \( ith \) course in any semester and \( GPi \) is the grade points earned by the student for that course. The summation is over all the courses registered by the student and evaluated during all the semesters up to that point of time, including the failed courses. The CGPA is rounded off to two decimals. The ranking of the students in a batch at any intermediate or final stage is based on CGPA.

**Grade Sheet**
Grade sheet issued to the student at the end of the semester will contain the following information.

1. Name, Roll No., Grade Sheet No., Semester, Branch, Month and year of Examination.
2. Course Code, Course Title, Credits and Grade Obtained, Grade Points Earned for the courses registered.
3. Credits registered and earned during the semester.
4. Cumulative Credits earned and Grade Points.
5. SGPA.
6. CGPA.

**Revaluation of Answer Papers**
An aggrieved student can request for revaluation of answer script of the end semester examination, through a well laid out procedure. There will be revaluation fee for each paper. If the revaluation leads to a better grade, the revised grade will be awarded to the
student and in such cases the revaluation fee will be refunded in full. Revaluation is allowed only for lecture-based courses.

**Course Completion**
A student is said to have successfully completed a course and earned the corresponding credits, if he / she has;

- Registered for the course.
- Put in 75% or more attendance in the course.
- Written the periodical tests and end semester examination.
- Obtained a pass grade D or above in the course.
- No disciplinary proceedings against him / her.

**REMEDIAL MEASURES**

**Supplementary Examination**
- Students with ‘F’ Grade may take the supplementary examination in a course up to a maximum of three additional attempts (excluding main end semester examination) carrying the previous internal assessment marks earned by them.
- Students failing to pass the course after two additional attempt shall henceforth appear for the supplementary examination for the entire 100 marks and the internal assessment marks earned by them in their regular registration shall not be considered.
- Grade Rule for supplementary examination: Supplementary exams will be evaluated against the most recent grade rule(whenever the course was offered recently during a regular semester)
- Fee for the supplementary examination will be Rs.300/- per paper during the regular duration of the program, after which the student shall pay Rs.1000 per attempt.

**Re-registration/Redo**
A student who has not secured a pass grade in a course in the initial registration can register for the same course when offered next along with the junior batch. Students with FA grade are also permitted to register. Two chances of re-registration is allowed per course apart from the regular registration.

**Contact Courses**
Students in the final semester with one or two arrears with F grade(s) can register for the contact course, if offered. The contact course will run for 45 / 60 hours of contact classes depending on the credit load of the course. Students with FA grade in a given course cannot register for the course under this option.

**Runtime Re-do Course**
Students with F / FA grade in course can register for a runtime re-do course, if available, on the condition that the total number of credits registered in the semester shall not exceed 28 credits. Runtime re-do courses are run concurrently with a regular semester and would last a full semester.

**Discipline**
Every student is required to observe strict discipline and decorous behaviour both inside and outside the campus and should not indulge in any activity which may bring down the prestige of Amrita Vishwa Vidyapeetham.

A disciplinary action committee will deal with any act of indiscipline of misbehaviour, unfair practice in the class / university examination etc., and its decision on the action to be taken shall be final. Serious acts of indiscipline may even attract penalty leading to expulsion from the University.

**Award of the Degree**

A student will be declared eligible for the award of the Degree, if he / she has:

- Registered and earned the credits for all the core courses and project work.
- Earned the minimum required number of credits for the branch of study as specified in the curriculum.
- Earned the specified number of credits in all categories.
- No disciplinary action pending against him / her.
- There are no outstanding dues against him / her.

**Classification of successful candidates**

A student shall be considered to have successfully completed the programme, if he/she has:

- a) registered and successfully completed all the core courses and projects.
- b) earned the required minimum number of credits as specified in the curriculum corresponding to the branch of his/her study, within the stipulated time.
- c) Earned the specified number of credits in all the categories of courses.

Candidates, who have successfully completed the programme, shall be classified as follows:

- a) Candidates securing a CGPA of 8.00 and above – DISTINCTION.
- b) Candidates securing a CGPA between 6.50 and 7.99 – FIRST CLASS and the same be mentioned in the Degree Certificate.
- c) If the programme is completed after six(B.Sc.)/four(M.Sc.) semesters of study, the candidates securing a CGPA of 6.50 and above shall be classified to have completed the programme, only with FIRST CLASS.
