# About the Department

B. Tech. in Electronics and Communication Engineering is a four-year professional undergraduate program offered by Amrita School of Engineering since 2002. Electronic and communication engineering is concerned with applying knowledge in electronics to facilitate communication and solve engineering problems. The curriculum is organized such that it enables students to get a strong foundation on various aspects of electronics and communication engineering such as digital systems design, electromagnetic theory, digital signal processing, microprocessors and microcontrollers, electronic circuits, VLSI design, digital communication, analog communication, control engineering, and microwave engineering. While building a solid foundation of the fundamentals, the students are also exposed to emerging trends in the industry and are molded to be quality professionals of the future. The students are also provided an opportunity to choose specialization electives to focus on their identified areas of interest such as embedded systems, wireless communication, satellite communication, biomedical signal processing, VLSI fabrication technology, speech processing, and optical communication.

## THE VISION

To provide a value-based learning environment for producing engineers with a blend of technical skills, moral values and leadership qualities in the field of Electronics, Communication and Computing channelized towards technological advancement to cater to the needs of the industry and the society

## THE MISSION

- Achieving excellence in teaching and learning with an emphasis on fundamental knowledge and hands-on exposure to match the state-of-the-art in technology.
- Providing an environment for core competency development and enhancing quality research in emerging areas.

# Message from our Chancellor

When we study in a college, striving to become a doctor, a lawyer, or an engineer - this is education for living. On the other hand, education for life requires an understanding of the essential principles of spirituality; it is about gaining a deeper understanding of the world, our minds, our emotions, and ourselves. We all know that the real goal of education is not to create people who understand only the language of technology; the main purpose of education should be to impart a culture of the heart, a culture based on spiritual values.

Communication through technology has made the world a small place yet there is so much of a division. Today's world needs people who express goodness in their words and in action with which the darkness prevailing in today's society will be dispelled and the light of peace and non-violence will once again illuminate this earth. Let us work together towards this goal.
